TIRANA 2026

1. Evaluation of the team members

(Please evaluate with grades the work done by your team members, and a short description of what they did.)

No	Name	*Team effort	*Time management	*General grading	Description
1	Aida Bedaj	10	10	10	Backend Development
2	Ajna Nushi	10	10	10	Frontend Development
3	Loric Hagard	10	10	10	AI Agent Integration
4	Parashqevi Klimi	10	10	10	Backend Development

(Explanation: * The grading given is from 1-10)

2. Comments about the work done by other members

Aida Bedaj: Aida handled the backend endpoints for students and admins, implemented GPA calculation on the Albanian grading scale, fixed a shared-state data leak between users, secured JWT configuration, and ensured student preferences were properly saved to the database.

Ajna Nushi: Ajna built the full student dashboard with six tabs and integrated the M.I.A chat interface. She handled error states, loading feedback, and responsive layout and polished all student-facing views for the final presentation.

Loric Hagard: Loric developed the M.I.A chatbot using the Groq API, integrated it with Supabase for persistent chat history, added student preference support, and extended it to notify students of attendance-based course failures.

Parashqevi Klimi: Parashqevi set up the Supabase project, designed the full database schema, built JWT authentication, and implemented the professor and student routers. She also produced the API documentation and led the final end-to-end integration testing session.

3. Work done by me

Team Leadership - Led and coordinated the team throughout the project. Organized weekly meetings, allocated tasks, submitted all group deliverables and kept the project on schedule.

Frontend Architecture: Set up the React + Vite project with Tailwind CSS, configured React Router for role-based routing, integrated Supabase authentication, and resolved CORS issues between the dev server and backend.

All Three Dashboards: Built and refined the admin, professor, and student dashboards. Admin covers user management, role assignment, and finance. Professor covers courses, grades, attendance, and assignments. Student covers grades and GPA, transcript, attendance, assignments, finance, and the M.I.A chat tab. Fixed a critical admin edit bug, added multi-file upload support, and resolved MIA chat integration issues.

Backend Contributions: Added a grade editing endpoint, introduced component-based grading with a new grade_components table, extended the admin attendance endpoint to return fields needed for rate calculation, and fixed an attendance overwrite bug with a 409 conflict response.

Grading System and Final Polish: Implemented the Albanian 4-10 grade scale conversion with GPA mapping, enforced the 75% attendance failure rule across all dashboards, corrected semester logic to the two-semester Albanian calendar, added scholarship support in the finance module, and reviewed the full project documentation before the presentation.
